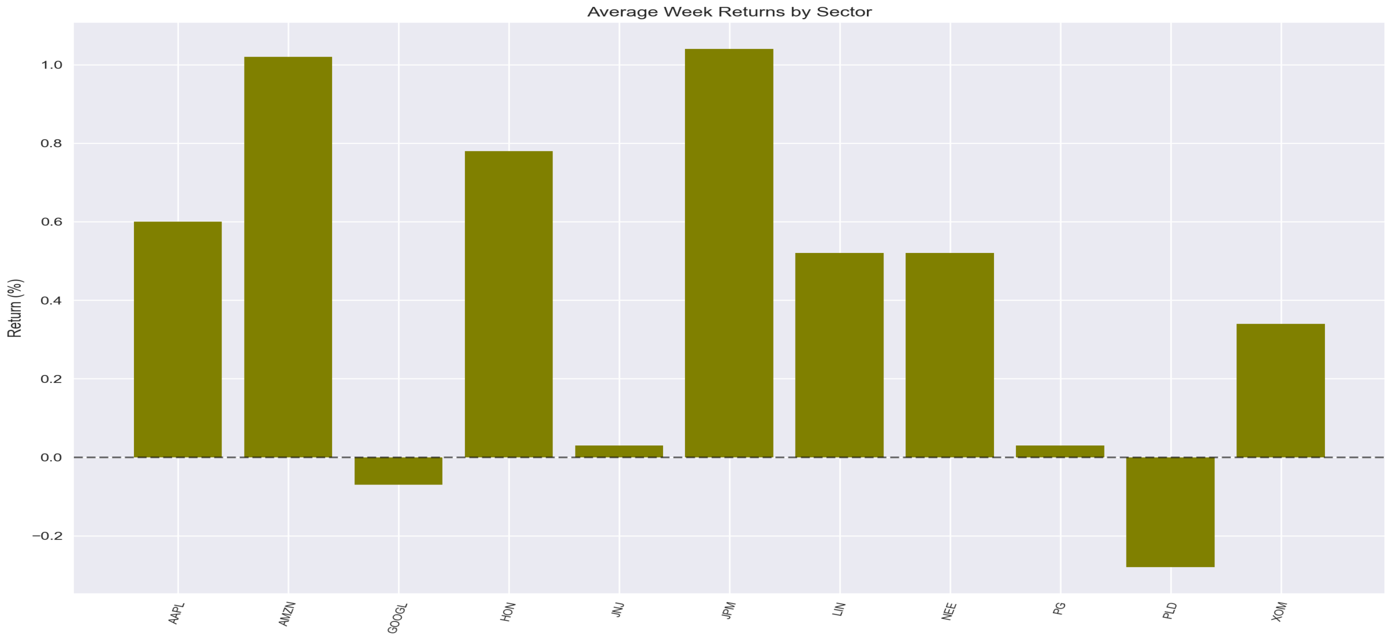
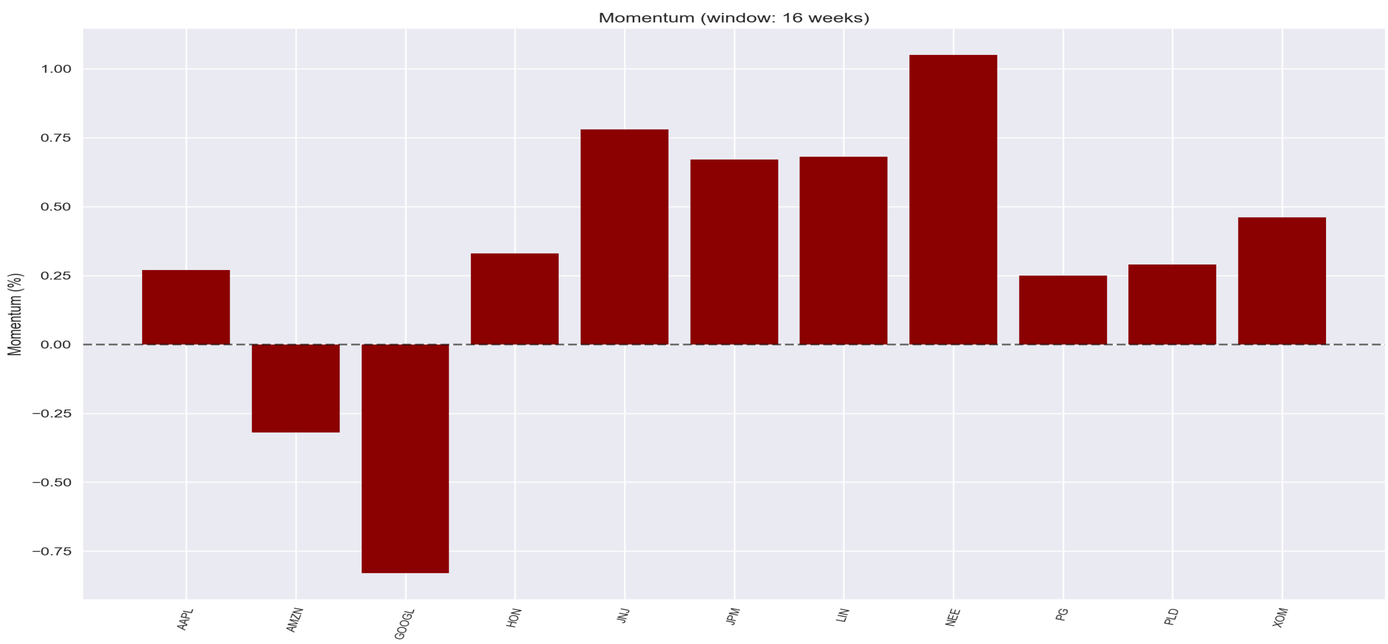
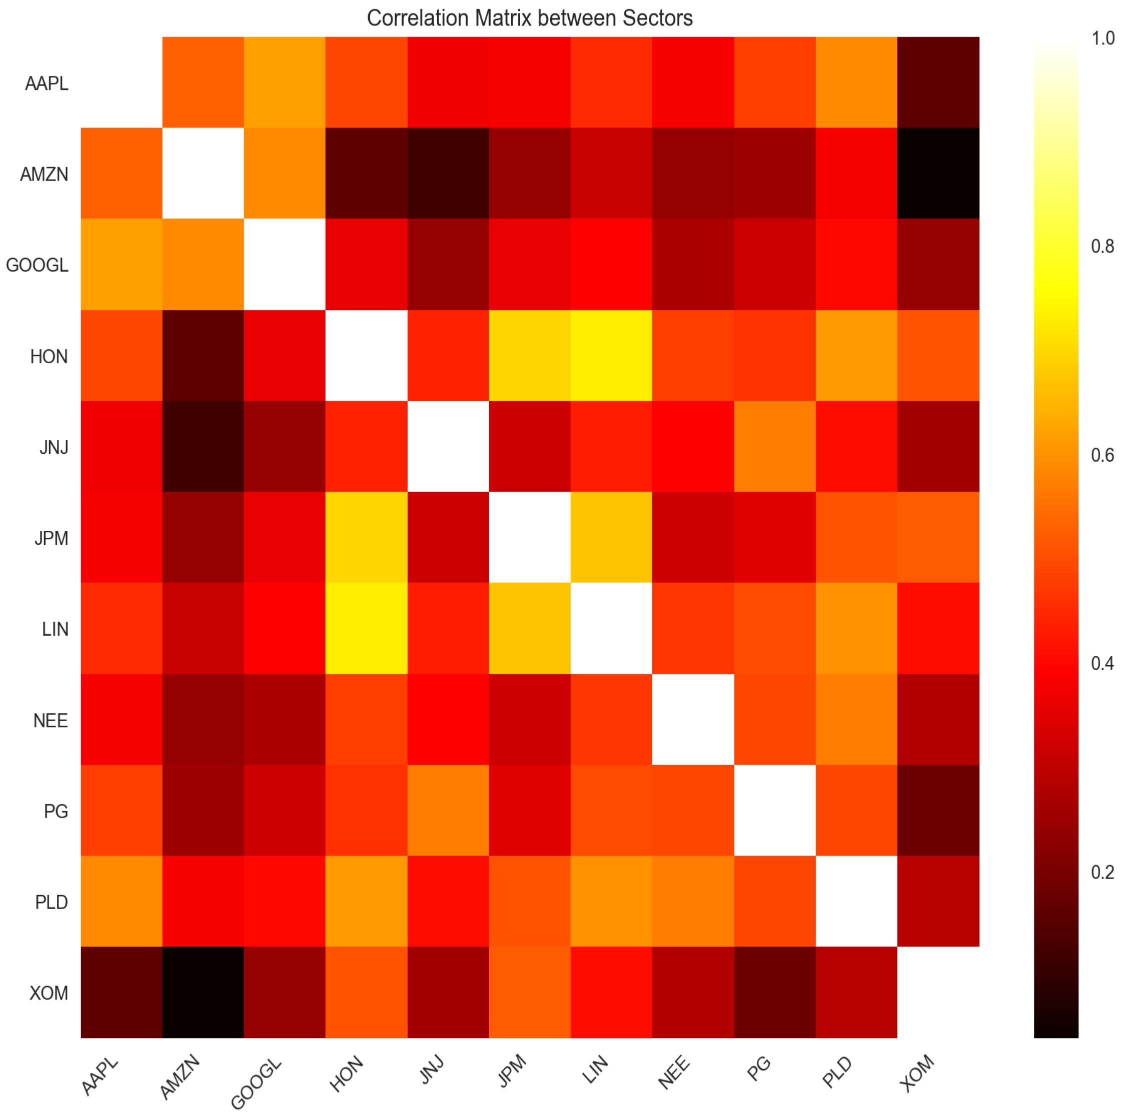
## 3. Sector Performance Visualization







Overall, average cross-sector correlation was 0.41, ranging from 0.04 to 0.73. This suggests elevated co-movement — diversification benefits are partially reduced. Correlation dispersion remains meaningful, indicating both tightly and weakly linked sectors. Strongest co-movement between HON and LIN (0.73); weakest between AMZN and XOM (0.04). Mixed regime: both market-wide and sector-specific forces are at play.
