

Portfolio rotation report

Date of extraction	2025-12-08 13:56
Data window	2019-12-30 → 2024-10-21
Frequency	Weekly — 252 observations. Sufficient depth: short- and long-term indicators are statistically reliable. Warning: the observation window exceeds the typical interpretability range for this frequency (+384.6% above the recommended upper bound). Results may blend multiple market regimes, reducing economic signal clarity.

Sector Allocation

Macro Profile Insight

Macro coverage

- Broad diversification: structure close to a market-wide benchmark.
- Broad balance across market capitalizations: diversification achieved across the size spectrum.

Sectorial biases

- Defensive bias: stable positioning with lower beta to the market.

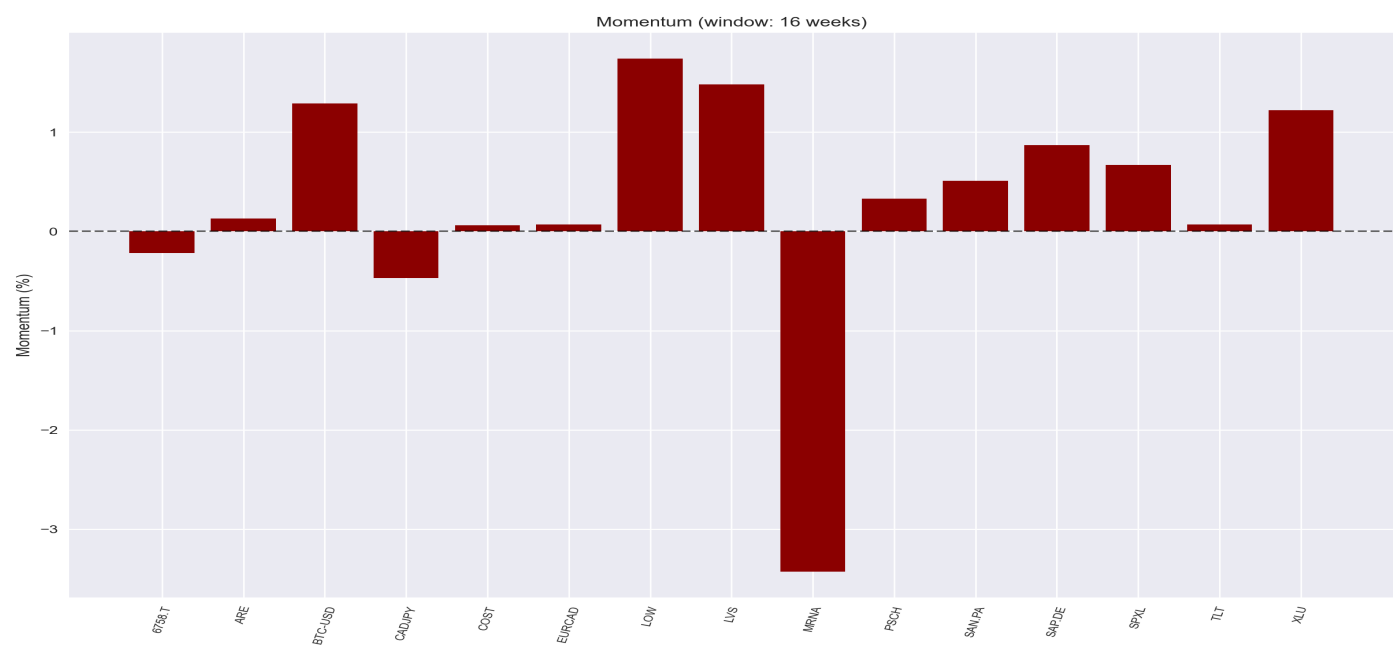

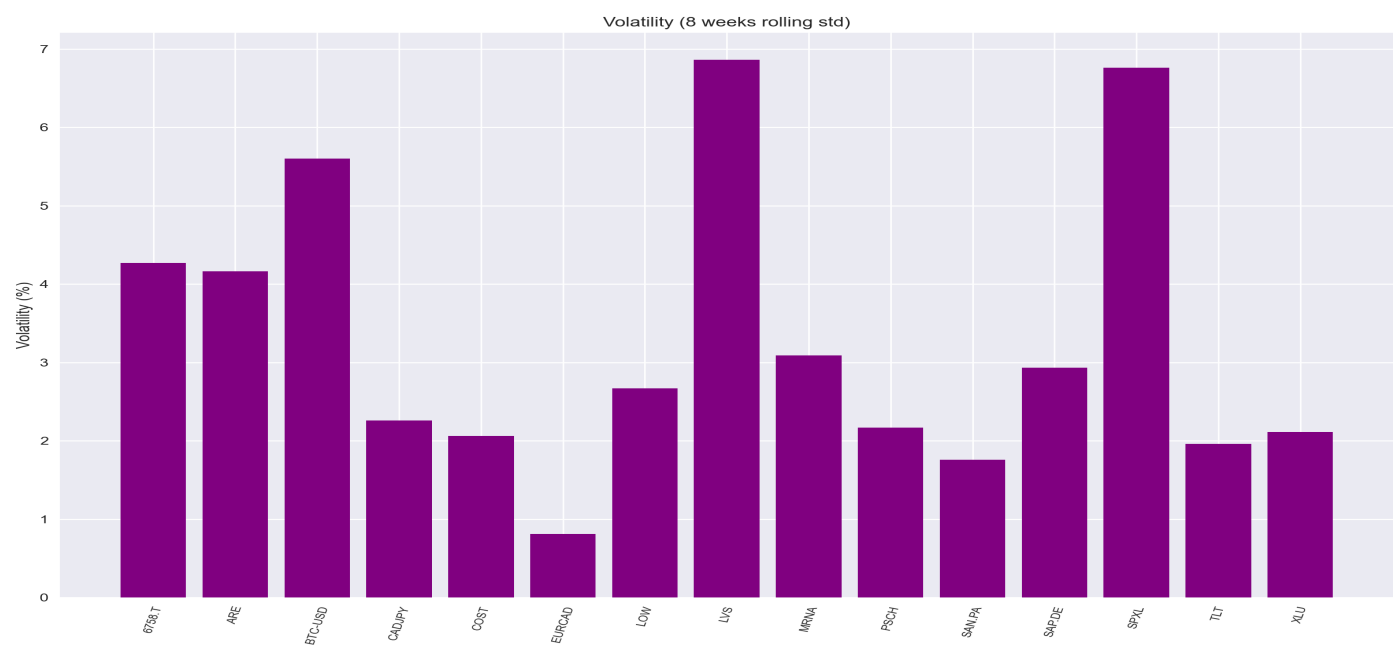

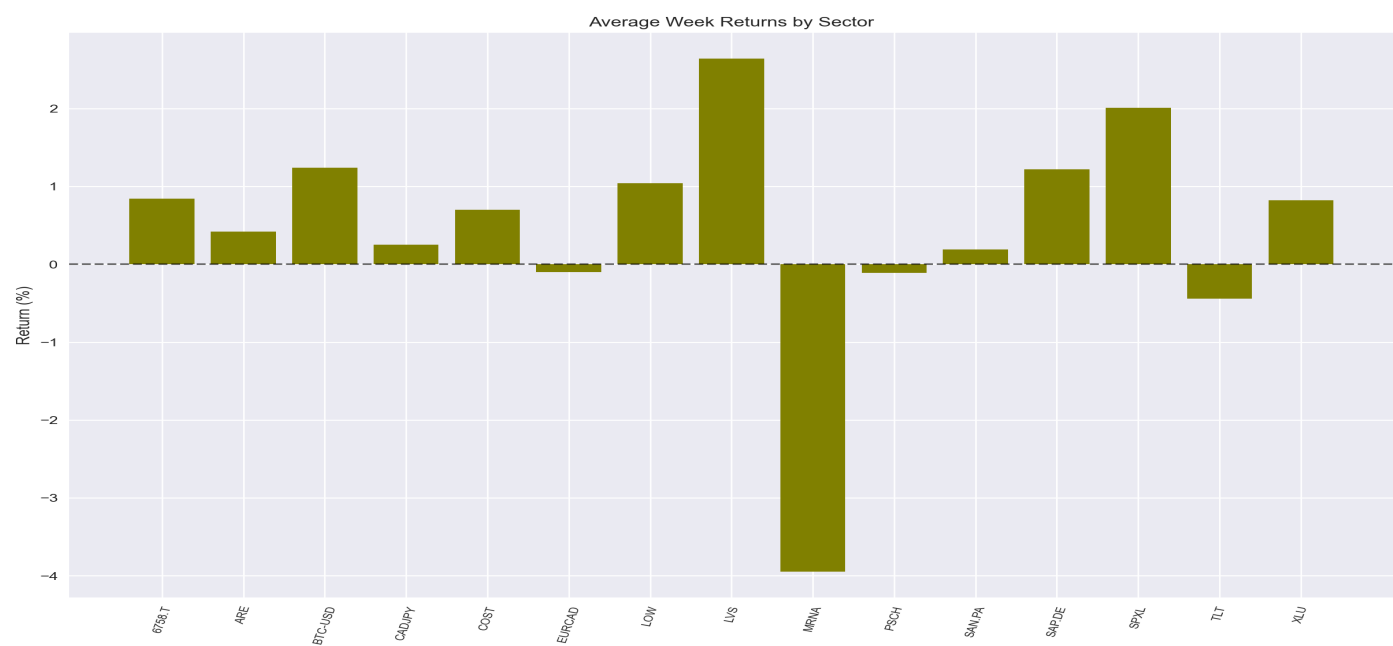

Structural properties

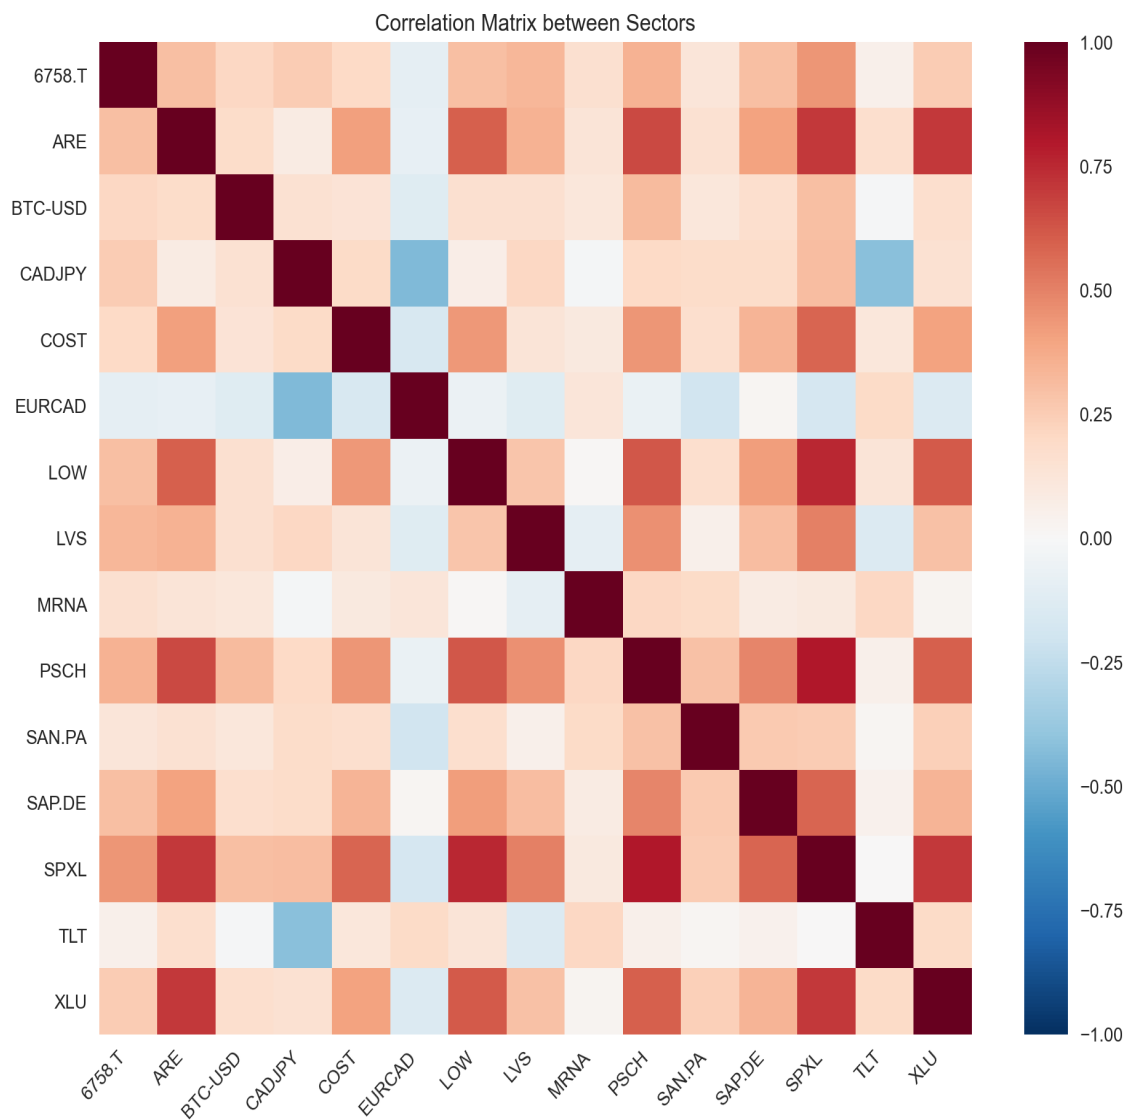

- Stock tilt: exposure primarily driven by stock dynamics.
- Liquidity stance: pockets of thin/illiquid names.
- Leverage present on some lines — monitor gap risk and path dependency.
- Market-neutral beta exposure: close alignment with index dynamics.
- Volatility profile skewed to dynamic/speculative names.

Additional comments

- Significant sector gaps: broad portions of the economy remain uncovered.

2. Sector Performance Visualization

Overall, average cross-sector correlation was 0.21, ranging from -0.44 to 0.80. This suggests moderate diversification — some co-movement exists but remains limited. Correlation dispersion is wide, showing sharp contrasts between sectors. Strongest co-movement between PSCH and SPXL (0.80); weakest between CADJPY and EURCAD (-0.44). Mixed regime: both market-wide and sector-specific forces are at play.
