Macro Profile Insight

- Macro coverage**
- Balanced diversification: exposure to most macroeconomic drivers.

- Sectorial biases**
- Cyclical bias: tilted toward economic expansion and inflation.
 - Inflation-sensitive bias: protection against rising prices but higher volatility.
 - Concentration risk: strong bias toward large caps, stability achieved at the cost of diversity.

- Structural properties**
- Concentration risk: portfolio heavily exposed to stock instruments.
 - Liquidity stance: pockets of thin/illiquid names; limited median dollar volume.
 - Defensive beta tilt: lower systematic risk profile.
 - Volatility profile skewed to dynamic/speculative names.

- Additional comments**
- No exposure to defensive sectors — performance may weaken in downturns.
 - Minimal rate-sensitive exposure — lower sensitivity to monetary policy shifts.
 - Underweight in technology and innovation sectors.

3. Sector Performance Visualization

Sector Dashboard – Factor Rotation Project (2025)

Overall, average cross-sector correlation was 0.46, ranging from 0.20 to 0.75. This suggests elevated co-movement — diversification benefits are partially reduced. Correlation dispersion remains meaningful, indicating both tightly and weakly linked sectors. Strongest co-movement between AIR.PA and DG.PA (0.75); weakest between AIR.PA and SAN.PA (0.20). Mixed regime: both market-wide and sector-specific forces are at play.
